10.1 Range of application

10.1.1 Admitted tripping speed

0,70 - 2,30 m/s

10.1.2 Admitted rated speed

0 - 2,00 m/s

10.1.3 Driving rope

10.1.3.1 Type

Circular strand rope
made of steel wire

10.1.3.2 Diameter

6,0 - 6,5 mm

10.1.4 Minimum tensioning force

135 N

10.1.5 Tensile force at minimum tensioning force

1000 N

(Tensile force has been determined by tests, and therefrom
the coefficient of friction calculated ($\mu = 0,23$))

10.2 Additional Notes

10.2.1 A nameplate bearing the following informations is to be attached permanently and so as
to be easily visible to the overspeed governor:

Name of component manufacturer

Type-examination sign

Adjusted tripping speed

10.2.2 Sense of rotation for engaging the safety gear shall be marked on the overspeed
governor.10.2.3 The direction of pull of the ropes is arbitrary, however, the traction force shall neither
exceed 4000 N if the direction of pull is turned by 90° against the normal direction (to
the righthand or lefthand side), nor 6000 N if the direction of pull is turned by 180°
against the normal direction (upwards).
The size of the tension weight shall be chosen accordingly.10.2.4 After setting the tripping speed the overspeed governor shall be sealed against unauthor-
ized adjusting and it must be impossible to change the spring, without damage the seal.

10.3 Validity Period

This certificate will be valid until April 1998.

10.4 Verification Period

5 years

10.5 This certification is based on the following documents:

10.5.1 Agreement on verification periods and validity periods of this
type-examination certificate, dated 23.09.1985

10.5.2 Expert opinion or supplementary opinion of test laboratory:

10.5.2.1 Expert opinion, 24.09.1985, D2-FTB-ku-be

10.5.2.2 Supplementary opinion, 31.03.1985, D2-FTA-tk-ro

Munich, this 06.04.1988

KUNDEREF.: 1227500 F.R.

FORM NR. 5

1 X 1000 M PÅ TROMM.

REBER SCHINDLER HEIS A/S

SERTIFIKAT NR. 77498....., 19.93....,

for prøving og undersøkelse av ståltau (wire) før det tas i bruk.¹⁾

| | |
|---|-------------------------|
| (1) Navn og adresse på fabrikant eller forhandler av tauet. | BRIDON NORGE A/S |
| (2) a) Omkretsen av tauet i engelske tommer, eller diameter i mm.*) | 6 MM |
| b) Antall parter | 6 GALV |
| c) Antall tråder i hver part (trådtykkelsen(e)). | 19+FC |
| d) Slagning (trosse, kabel, høyre, venstre.) | HØYRE KRYSS |
| (3) Materialet i trådene (strekkfasthet kp/mm ²) | 180 KP /MM2 |
| (4) a) Datum da tauprøven ble utført. | / / |
| b) Tauprøvens bruddbelastning. | 1999 KG |
| c) Tillatt arbeidsbelastning med angivelse av enhver gitt betingelse for denne, som f.eks. en minste skivediameter, en direkte belastning etc. | 20 % AV BRUDDBELASTNING |
| (5) Navn og adresse på den institusjon, det selskap eller firma eller den person som utførte prøven. | KISWIRE |
| (6) Den ansvarshavende stilling i ovennevnte institusjon, selskap eller firma som utførte prøven, eller, dersom sertifikat gis av en person som utførte prøven på eget ansvar, hans kvalifikasjoner for dette arbeid. | SAKKYNDIG |

Jeg attesterer herved at de ovennevnte oppgaver er riktige og at undersøkelsen og prøven ble foretatt av en sakkyndig person.

BILLINGSTAD, den 31.08 1993

Kunde: Ullevål Sykehus

TEKNISKE BEREGNINGER

Vekt av heisstolen : 1000 kg
 Heisens nyttelast : 1200 "
 Samlet vekt : 2200 kg

Tauberegning:

Antall tauer 6 stk. á 13 mm Ø "Seale"

Taudata:

| | | | | | | |
|----------------------------------|--------|------|------|------|------|------|
| Taudiameter mm | : 5 | 6,5 | 8 | 11 | 13 | 15,5 |
| Metalltverrsnitt mm ² | : 9,75 | 16,4 | 23,1 | 41,3 | 61,9 | 82,7 |
| Tråddiameter mm | : 0,33 | 0,32 | 0,38 | 0,44 | 0,54 | 0,62 |

Bruddfasthet: 145 kp/mm²

Tausikkerhet:

$$\frac{\text{bruddfasthet} \times \text{antall tauer} \times \text{tverrsnitt}}{\text{samlet vekt}} = \frac{140 \times 6 \times 61,9}{2200} = \underline{\underline{23,6}} \checkmark$$

$$\frac{\text{Tauskive}}{\text{Taudiameter}} = \frac{556}{13} = \underline{\underline{42,8}} \checkmark$$

$$\frac{\text{Tauskive}}{\text{Tråddiameter}} = \frac{556}{0,54} = \underline{\underline{1030}} \checkmark$$

Beregning av føringene:

Etter Eulers formel:

$$\frac{\text{vekt} \times \text{festeavstand}^2 \times \text{fangfaktor} \times 2}{\pi^2 \times E \times 2} = \frac{2200 \times 250^2 \times 5,3 \times 2}{10 \times 2,1 \times 10^6 \times 2} = \underline{\underline{34,7}} \text{ cm}^4 \checkmark$$

Vennesla, den 21.1.75 J.L.
