

Appendix 2 – Final Report

Minimum specification for the final processing report:

- 1 Personnel and processing equipment.
- 2 Seismogram processing.
 - 2.1 Tests and choice of parameters:
To include a full description of all processing tests carried out, with reasons for parameter selection. Displays of stack images at key processing stage shall be enclosed.
 - 2.2 Processing sequence:
This should also include a description of quality control and initial preparation of the field data.
- 3 Velocity studies. Comments on stacking-velocities and their determination.
- 4 Proposals for future processing. This should include a general review of the processing carried out with particular regard to difficulties encountered, and their possible long-term solution.
- 5 Description of programmes used.
- 6 One paper copy of the report and one electronic on CD will be delivered to the Directorate.
